Create LZIP archives with compressed files The program has an interface similar to gzip and bzip2. It gives you the possibility to limit the dictionary and volume size, test the integrity of archives to make sure that no errors occurred during compression, apply verbosity, as well as pick the level of compression, whether you want to favor minimal file size or best compression speed. Run the tool from Command Prompt It's not necessary to go through an installation operation since you can just unpack the downloaded files and run them from the console environment. A list of all commands can be displayed on the screen by writing --help. The usage is lzip [options] [files]. As far as options are concerned, you can set the member size limit in bytes (-b), allow the tool to overwrite any existing output files (-f), force the recompression of already compressed files (-F), and prevent the program from automatically deleting the source files after successfully compressing them (-k). Configure compression settings It's also possible to display the sizes of the compressed or uncompressed files (-l), specify the match length limit in bytes (-m), suppress all messages in the console interface (-q), indicate the dictionary size limit in bytes (-s), and point out the volume size limit in bytes (-S). The integrity of the compressed files can be checked (-t), and you can also apply verbosity (-v) and set the compression level to any level between 0 (fast) and best (9, default is 6). Although it is not common among casual users, LZIP is a file format recommended for generating archives

Lzip is a utility designed to create LZIP files and extract LZIP archives. Lzip is the successor of xar. Lzip can compress LZIP files, create LZIP archives, extract LZIP archives, recover LZIP files, and unpack LZIP archives. The program can also compress LZIP archives, and extract archives. Lzip uses LZMA format for algorithm. Lzip decompresses the files faster than other decompression tools. As Lzip only extracts LZIP files and compresses LZIP archives, if you have LZMA compression format software installed, you can use it. If you do not, Lzip can use other compression software if you want. Lzip cannot compress files using other files and compress many files into a single archive. Changes Lzip is a completely new project. It is not forked from xar project. Support for Lzip has been added to the official Android xar repository.
