XP Booster 1.0 With License Code

XP Booster is a complex and efficient piece of software aimed to offer you the means of gaining access to a series of operating system functions that are regularly reserved to the Professional edition of Windows XP, and are otherwise unavailable in the Home edition. When running the executable of the utility, you will be prompted to select the floppy drive letter that you want to place XP Booster on, from the drop-down menu. After clicking on 'Create Floppy', its contents will be completely erased and XP Booster will be installed on it, allowing you to work with it as you would with any bootable drive, by restarting your computer and having it boot from the floppy. After having booted your computer from this removable drive, you will simply need to choose which features and options of Windows XP Professional you want to activate. Since all of them feature only two answers, corresponding to 'On' and 'Off', there is little risk that you will not be able to handle XP Booster or damage it. With this application, you will be able to improve the booting time of your PC as well as enhance the login security. Moreover, XP Booster lets you disable the error report feature in Windows XP, as well as add the remote control functionality to your OS. Similarly, you will be provided with 'Access Control', being able to decide which files, folders or programs cannot be accessed by other users. An additional function refers to the ability to access data stored on a network share, even when you are not connected to the server. XP Booster 1.0 [Win/Mac]

XP Booster is a tiny standalone application that provides a way for Windows XP Home Edition users to add new functionality to their computers and gain easier access to certain parts of the OS. With XP Booster 1.0, you will be able to have a much better PC experience by being able to:

Q: Contacts Web Service and Android I have a problem about the Contacts Web Service. I have to make an application that only can read a list of the contact saved in the phone. I've read this code: `InputStream stream = null; ContentResolver resolver = getContentResolver(); Uri uri = ContactsContract.CommonDataKinds.Phone.CONTENT_URI; String[] projection = new String[] { ContactsContract.CommonDataKinds.Phone.DISPLAY_NAME, ContactsContract.CommonDataKinds.Phone.NUMBER }; Cursor cursor = resolver.query(uri, projection, null, null, null); if(cursor!=null) cursor.moveToFirst(); int id=0; if(cursor!=null) id=cursor.getInt(cursor.getColumnIndex(ContactsContract.CommonDataKinds.Phone.CONTACT_ID)); cursor.close(); Toast.makeText(this, "Id of contact "+id, Toast.LENGTH_SHORT).show();` But, my problem is that this application can not read the phone contacts, but it can read the contacts of the Google Contacts. Do you know if is possible to make this application work with the Contacts in the phone? Thanks.

A: The API you have used in the code sample is to query for the contact list. If you want to access the Contacts API, you need to use `ContactsContract.CommonDataKinds.Phone.CONTENT_URI`.

A: If the device runs Android 4.
